

Have you or your child been diagnosed with mitochondrial encephalomyopathy, lactic acidosis, and stroke-like episodes (MELAS)?

If so, we want to hear from you or your child! Tisento Therapeutics is sponsoring a research study to talk to individuals about their experience with MELAS. Tisento Therapeutics will be evaluating an investigational drug called Zagociguat in an upcoming clinical trial and you or your child's perspectives will help shape how the effects of Zagociguat will be assessed.

You or your child needs to be:

- **English speaking**
- **12-17 years of age**
- **Genetically & clinically diagnosed with MELAS**

The compensation will be \$150 for completing two 45-minute interviews, which can be completed from the comfort of your home and at your convenience.

If interested, please contact Adelphi Values, who is performing these interviews for Tisento, and reference the **MELAS study**:

- MELAS@adelphivalues.com
- **(617) 720-0001**

*This is **not** a medication-related study. No medication will be administered during this study. Your inclusion in the interviews will not replace or affect any care or assistance you are currently receiving or may receive in the future.*
